Detailed Action

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

The primary reasons for allowance are the amendments¹ to the claims narrowing the glass disk textures and roughness ratios; the absence of evidence for anticipation or obviousness in the newly submitted art of the IDS² and the showing³ of unobviously superior results commensurate in scope to what has been claimed.

The claims are drawn to a narrow range of a glass disk textures and roughness ratios for disc shape glass substrate for magnetic recording medium having concentric circles ridge textures where the width 10-200nm at a expressly claimed reference cut plane has a texture 2-10nm and roughness ratio, R_p/R_{ms} , ≤ 15 not suggested in the art where a percentage of texture area in the cut plane with respect to the area of the measurement range is bearing ratio and the height of the textures when the *bearing ratio* is 50% is reference height. The height of the textures from the *reference height* in a plurality of *bearing ratio* is bearing height with difference between the *bearing heights* when the *bearing ratio* is 0.4%. The *bearing height*, when the *bearing ratio* is 1.0%, is 0.15nm to 0.18nm for the texture. These have not been specified in the art.

The IDS received 9/19/08 has been considered. No IDS reference teaches or renders obvious in combination the invention now claimed. JA11-003513, JA09-035261, JA05-199264, JA 2001-101649 have no teaching of *bearing height* when the *bearing ratio*. JA11-003513 is directed to particles on polyamide film; JA09-035261 is directed to methods of laser irradiation; JA05-199264 is drawn to vapor or liquid etching; JA07-006360 is directed to texturing NiP to form grooves;

¹ Received 6/6/2008

² Received 9/19/08

³ Instant specification examples pages 29-44

JA 2001-101649 is directed coating to NiP alloy alignment films – all without specificity to a bearing ration. Sakai et al (US 6383404) refers to bearing heights however these bearing heights do not correspond to the instant bearing heights measurement claimed and refers to roughness however only *Rms/Ra* which can not be translated to the instant *Rp/Rms* roughness measurements. Applicants have also demonstrated an unobvious decrease in crashes (Examples 25 to 29) with the instant *bearing height* when the *bearing ratio* is 0.4% and the *bearing height* when the *bearing ratio* is 1.0% between 0.15nm and 0.18nm, evident from Table 8 summary - specification top pg 44, *commensurate in scope* to what has been claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The claims are 16 to 21.
 - All claims have been allowed.
 - The Information Disclosure Statement received 9/19/08.
